Review articles are comprehensive, scientifically accurate summaries of topics in clinical or basic science dealing with areas of current clinical relevance, promising experimental therapies, or emerging scientific concepts. Reviews should describe basic and clinical investigations, discuss the physiological and clinical significance of the work, and place it in context with previously published information. Contributors identify areas of agreement and disagreement among researchers, promote unifying hypotheses to explain current controversies, and explore potential avenues for further investigation. Authors also need to discuss what process is used in the review of the literature.

Please submit an outlined proposal (according to guidelines below) for approval by the Diabetes Care Editorial Committee. If the proposal is approved, you may then submit your manuscript for review and possible publication in Diabetes Care.

The proposal should include:

- a detailed outline of the content of the proposed review;
- a general idea of the original literature to be summarized; and
- a bio of each author supporting his/her expertise in the area of the review.

The proposal should also:

- disclose whether the author(s) will write the entire article themselves, whether any form of sponsorship or honorarium for the material was received, and whether a pharmaceutical company, or its representative, was involved in funding or authorship;
- declare any potential conflict of interest with a company whose products will be discussed in the review; and
- explain why the author(s) feels this particular review is suited for Diabetes Care and why it would appeal to the readership.

It is anticipated that the author(s) will have worked and published in the area of the review.

Proposals should be submitted as Word documents to Lyn Reynolds (lreynolds@diabetes.org).

Proposals submitted by the first Wednesday of each month will be discussed at the next editorial meeting, which is held on the second Monday of each month. If the proposal is approved, you may then submit your manuscript for review and possible publication in Diabetes Care. Submitted manuscripts will undergo a standard peer-review process; therefore, publication acceptance is not guaranteed. If the manuscript is accepted, page charges will apply.
Review Proposal Outline:

**Short Introduction Letter**: Complete Contact Information for Corresponding Author and a paragraph disclosing expertise in the area and why authors are suited to write the article.

**Outline**:

**BACKGROUND / INTRODUCTION / ABSTRACT**:

1. Why is it important to review this topic?  
2. Focus

**OVERVIEW/ OBJECTIVE**:  

1. Major issues to be addressed

**LITERATURE REVIEW**:

1. Sources  
2. From ? year to ? year inclusive  
3. Method used

**TOPICS OF REVIEW / DESIGN / PARTICIPANTS / OUTCOME**:

**RESULTS**:

**CONCLUSIONS**:

**AUTHOR(S) BIO**:
